PortaSwitch® Customer Care Staff Interface, June 2020 Maintenance Release 85 V1.85.01

Please address your comments and suggestions to: Sales Department, PortaOne, Inc. Suite #408, 2963 Glen Drive, Coquitlam BC V3B 2P7 Canada.

Changes may be made periodically to the information in this publication. The changes will be incorporated in new editions of the guide. The software described in this document is furnished under a license agreement, and may be used or copied only in accordance with the terms thereof. It is against the law to copy the software on any other medium, except as specifically provided in the license agreement. The licensee may make one copy of the software for backup purposes. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, electronic, mechanical, photocopied, recorded or otherwise, without the prior written permission of PortaOne, Inc.

The software license and limited warranty for the accompanying products are set forth in the information packet supplied with the product, and are incorporated herein by this reference. If you cannot locate the software license, contact your PortaOne representative for a copy.

All product names mentioned in this manual are for identification purposes only, and are either trademarks or registered trademarks of their respective owners.

Preface

This document provides a general overview of the web interface for the PortaSwitch® Customer Care operators.

Where to get the latest version of this guide

The hard copy of this guide is updated upon major releases only, and does not always contain the latest material on enhancements that occur inbetween minor releases. The online copy of this guide is always up to date, and integrates the latest changes to the product. You can access the latest copy of this guide at: www.portaone.com/support/documentation/.

Conventions

This publication uses the following conventions:

- Commands and keywords are given in **boldface**.
- Terminal sessions, console screens, or system file names are displayed in fixed width font.

Exclamation mark draws your attention to important actions that must be taken for proper configuration.

NOTE: Notes contain additional information to supplement or accentuate important points in the text.

Timesaver means that you can save time by taking the action described here.

Tips provide information that might help you solve a problem.

Gear points out that this feature must be enabled on the Configuration server.

Trademarks and copyrights

PortaBilling®, PortaSIP® and PortaSwitch® are registered trademarks of PortaOne, Inc.

Audience

The target audience of this document is Customer Care operators who will be managing your services via the PortaBilling® web interface.

Hardware and software requirements

Client system recommendations

- **OS:** MS Windows 7 or above, Linux/BSD, macOS Sierra (version 10.12) or above.
- Web browser:
 - Google Chrome 76 or above, Chromium 76 or above, Mozilla Firefox 68 or above.
 - JavaScript and cookies must be enabled.
- **Spreadsheet processor:** MS Excel, OpenOffice Calc, LibreOffice Calc, Google Sheets.
- **Display settings:** a minimum screen resolution of 1366 × 768.

1 Introduction

The front-end design and functionality of PortaBilling are simple and intuitive. The pure web interface of the PortaBilling Customer Care home page is the main door to all the objects and tools of this part of the system. Divided into four functional blocks the links load pages containing tools for managing the system and helping customers. Each second level page contains a link back to the home page.

6	Ξ	88 (1 Q			C	C Staff		America/Vancouver	test-costaff	1	Help
•										NO Logout		
					My Info		Products					^
				*	Distributors Subcustomers	Q	Account Info Trace Session					- 1
												-
<u>8.</u> 2	001-20	18 Ports	One, Inc. /	All rights reserved.						>> (redits	s and links

The four functional areas are:

00

Products

Distributors Subcustomers

Account Info Trace Session Commonly required contact information, web self-care credentials, user's time zone and information on individual user's credit.

Information related to charging customers for services, such as products and tariffs.

Task related to such entities in the system as distributors and subcustomers and accounts.

Tasks available to help CC staff for assistance in troubleshooting problems that clients may inquire about.

Common features

All of the functions available from the home page are also available from the drop down menus:

6	II 00	÷	<u>Q</u>
•	🛞 Close		Account Info
			Trace Session

Right top side of the interface provides user with following information:

() <u>America/Vancouver</u>	test-ccstaff	? Help
Limit: 50.00 USD	🕅 Logout	

- 1. Time Zone where the current user operates.
- 2. Login name of the currently logged in user.
- 3. Context help for the current screen. Clicking this link will pop-up help window.
- 4. Refund limit for the current day.
- 5. Logout button. Used to finish current session or when necessary to login as another user.

Also on the toolbar is often a list of available actions to take relative to the current page:

This toolbar acts as the equivalent of the "File" menu of the application as it is the usual location for "Save", "Close", and "Add New" operations.

Sorting tables

on	Connect Time	Disconnect Time	 Duration, min:sec 	Ace
atch es	24 Aug 2002 01:35:35	24 Aug 2002 01:35:35	0:00	
atch es	23 Aug 2002 20:51:50	23 Aug 2002 21:30:12	38:22	
atch	23 Aug 2002	23 Aug 2002		

This feature is available for the CDR browser and Call Trace screens where it necessary to sort viewed information by different criteria. Table header cell with orange triangle shows the sorted row. Triangle down represents descending order, and triangle directed up suggests the sorting is ascending.

The sorting is available for all columns with bi-directional white arrow in the top left corner of the header cell. To sort columns simply click on the header; click the same column again for the opposite sorting order.

Another cool feature of sorting tables is that table header is always visible.

Tab controls

Some forms (e.g. customer or account information) contain so much information that it is not feasible to display it all on a single screen. The standard practice in this case is to divide the information between multiple tabs, each of which contains only a portion of the information and can be individually selected for display. To provide a better user experience with a high number of tabs, PortaBilling® provides two rows of tab controls.

á = s + Q	Account Info / Retail Customer 'Talos'	America/Vancouver	test-ccstaff	12	Help

Date & Time	YYYY-MM-DD HH24:MI:SS User Defined V				
Input Format					
Date	YYYY-MM-DD 2003-12-31				
Time	HH24:MI:SS User Defined Y				

When you click a tab's name, it is selected (black font on a white background) and you can see the associated information. Note that even if a tab from the upper row is selected, the row order does **not** change and all the tabs stay in their original location. Thus you can always remember where a particular tab control is located on the form; see below for an example where a tab from the upper row has been selected.

🖆 🗏 🗄 🔁 🛛 Account Info / Retail Customer 'Talos' 🕚 America/Varcouver		2 Help

External voicemait: Disabled Access number.*		

Date & time format

PortaBilling® allows users to define both the input and output formats for date and time.

Output Format			
Date	YYYY-MM-DD	2003-12-31	T
Time	HH24:MI:SS	User Defined	T
Date & Time	YYYY-MM-DD HH24:MI:SS	User Defined	T
Input Format			
Date	YYYY-MM-DD	2003-12-31	T
Time	HH24:MI:SS	User Defined	¥

Making changes to the date and / or time format on this page enables users to enter dates and times in the desired format throughout the entire PortaBilling® web interface. Correspondingly, all pages generated at a user's request will contain the date and time in the previously set-up format.

Date / Time format strings are composed using specifiers that represent the values to be inserted into the formatted string.

In the following table, the specifiers are given in upper case. Formats are case-insensitive.

Specifier	Value	Description			
		Date			
DD	01-31	Day of the month			
D	1-31	Day of the month without a leading 0			
MM	01-12	Number of the month			
MON	Jan-Dec	Name of the month			
MONTH	January-	Full name of the month			
	December				
YYYY	2003 +	Year			
YY	00-99	Last two digits of the year			
		Time			
HH, HH24	0-24	Hours			
HH12	0-12	12-hour time format; requires AM/PM			
		specifier			
MI	0-60	Minutes			
SS	0-60	Seconds			
AM, PM,	AM, PM				
AM/PM					
		Separators			
A separator can be any symbol except for letters and digits, or may be left blank					

Example	Value
DD/MM/YYYY	12/03/2003

MON-DD-YY	MAR-12-03
HH:MI:SS	12:30:00
HH12 MI:SS	WRONG! AM/PM specifier is missing
HH12mi pM	1230 AM

My info

My Info screen allows you to edit personal information and view some details of your account.

Address info

Here you can set most of the commonly required contact information.

Products

A product is a combination of services that is provided to a customer for a price. It defines additional billing properties such as maintenance fees and the amount of credit required for a given account to be usable. The most common use of Products is for defining prepaid calling card plans.

â	II II 🗄 🖸		Produ	ict Managem	ent			() America/Vancouver	test-ccstaff	P Help

From the Product Management screen, the user may view the list of all registered products. The list provides the following information:

Column	Description
Rate Lookup	Click the 🔎 icon to enter the Rate Lookup
	interface using which you can easily view rate
	information for a tariff(s) of a particular product.
Name	The logical designation of the product.
Туре	The product type can be the following:
	• Main Product – A basic product that
	assigns all the basic services that are
	available to your customers.
	• Add-on Product with precedence level – An additional product by which you can increase or limit the services provided to your customers.
	Add-on products have precedence over the main product, so no matter what is defined within the main product, it will be overridden by settings defined within add-on products (this applies only to the options that are supplied with add-on products).
	In order to differentiate the add-on products there is also a " precedence level " parameter for each add-on product. If there are more than one add-on products assigned to an account they will be sorted according to the specified precedence level .
Currency	The currency in which the product is maintained.
Description	Product description.

Rate lookup

Having entered the Product Rate Lookup page use search filters to display (a) specific rate(s):

					Q	John Dust		USD	Prepaid	10	00.0000			- j	ohn.dust@example.com		×		

Column	Description
xDRs	Click the View licon to go to the xDR view page.
ID	The customer's identification name.
Accounts	Click the Accounts 🗊 icon to go to the Account

	Management screen (for retail customers).					
	If there are no accounts under the customer, the					
	icon changes accordingly to , so that you can					
	easily see this.					
Currency	The currency in which the customer's account is					
•	maintained and billed.					
Balance	The subcustomer category: either prepaid or					
Control	postpaid, depending on the way their balance is					
	controlled.					
Available	The amount of available funds to spend on					
Funds	services – is only shown for prepaid subcustomers.					
Balance	The customer's current balance.					
Credit Limit	The credit limit applicable to the customer's account					
	(if any).					
Email	Email contact for this customer.					
Status	A customer may have the following statuses:					
	 Permanently terminated – The customer 					
	has been closed and is only in the database for					
	informational / regulatory purposes. No further					
	operations are possible with this entity.					
	• Blocked – The customer has been blocked					
	by the administrator; no call services are					
	provided until the administrator removes the					
	block.					
	• Suspended – Services for this customer					
	have been suspended because of an overdue					
	invoice.					
	Brovisionally Terminated – Once a					
	customer is provisionally terminated, all services					
	are terminated. There still exists the option to					
	reactivate the services that were disconnected if					
	the customer changes their mind.					
	• A Credit Exceeded – This indicates that the					
	postpaid customer's balance is above his credit					
	limit, so he will not be allowed to make					
	outgoing calls unless they are free calls (e.g. toll-					
	free numbers).					
	• A No Available Funds – This status is only					
	for prepaid customers. When a customer's					
	funds reach zero value, services are no longer					
	available.					
	• Suspension Lifted – This indicates that the					
	customer's suspension has been lifted (the 'as					
	of date is specified on the Change					
	status button).					
	• Payment Frozen – This indicates that the					
	• • • • • • • • • • • • • • • • • • •					

	customer's payment has been suspended due to repeated errors (e.g. credit card cancellation).
	Spending Limit Reached – This indicates
	that the customer's daily spending limit has
	been reached.
Delete	Click the Delete icon to remove the customer.
	The delete icon appears only if there are no xDRs,
	accounts owned by the customer, other entities
	(products, tariffs, etc.) managed by the customer or
	the customer does not participate in bilateral traffic
	exchange with a vendor.

Advanced search

In advanced search mode, you can specify an unlimited number of search conditions. Every condition applies to a particular field (e.g. customer's ZIP code). Click on 🗈 Add a new search condition to add another condition.

₫		: 88	(ł	Q		Sub	customer Ma	anagemen	t		() America/Vancouver	test-ccstaff	🛛 Help
•	Đ	Add	1	8	Close							Limit: 50.00 USD	📲 Logout	
						 Add a New Se Company Name	ANY	ner Class T		earch ed Search Easy Call	Back to Simple Search	X		
						First Name	٣	Is	٣	John		×		
						Last Name	٣	Is	•	Doe		×		

Operation	Description
Is	The value of the field in the customer information
	must match the search criteria exactly.
Begins with	The value of the field in the customer information
	must start with the specified value (e.g. if you enter
	the filter value "John", customers with the names
	"John" and "Johnny" will be selected).
Contains	The value of the field in the customer information
	must contain the specified value somewhere (e.g. if
	you enter the filter value "Eric", customers with the
	names "Eric", "Erica", "Maverick" and "American"
	will be selected).
Ends with	The value of this customer information field must
	end with the specified value (e.g. if you enter the
	filter value "smith", customers with the last names
	"Smith" and "Hammersmith" will be selected).
Is empty	The corresponding field in the customer
	information must be empty.

All search operations are case-insensitive, so you can enter "Eric" as a search criterion and, even if the customer's name was originally entered as "eric" or "ERIC", you will still see him in the list.

All conditions work in conjunction, so in the case of multiple search criteria the customer's record must satisfy all of them in order to appear in the result list.

During a search operation using auxiliary fields (e.g. fax) or the "contains" comparison, the database cannot use indexes. This will result in a full table scan, meaning an increased load on the server and a longer time to produce the final result. Please avoid using such search operations if not necessary.

Edit Customer

This page allows you to change details for a particular customer.

C A			Back Done Cancel
A	ddress Line 2		

Field	Description
Action	Manual Charge: Use this transaction to manually charge a customer for a specific service they used; for instance, if you are selling SIP phones to a customer. This means the balance will be changed so that the customer is able to make fewer calls.
	Manual Credit: Use this transaction to manually give compensation related to a specific service; for instance, if the customer files a complaint and you agree to give him credit toward future service use. This means the balance will be changed so that the customer is able to make more calls.
	Manual Payment: Use this transaction when you receive a payment (e.g. cash or check) directly from the customer. This means the balance will be changed so that the customer is able to make more calls.
	Promotional Credit: Use this transaction to give the customer credit, for example, as a sales promotion. The difference between this and the "Manual Credit" transaction is that this transaction applies to a special "Credits / Promotions" service, and not to any actual service. Basically, it provides some "virtual" funds to the customer for future use.
	Refund: Use this transaction to refund an earlier payment received from the customer (e.g. a check returned by the bank). This means the balance will be changed so that the customer is able to make fewer calls.
	E-Commerce Payment: Use this transaction to

	charge the customer's credit card and apply the amount to the customer's balance as payment.
	E-Commerce Refund: Use this transaction to reverse a previous E-commerce payment. It withdraws funds from your company's merchant account and applies them as credit to the user's credit card. The amount is added to the user's account balance.
	Authorization Only: Verifies that the customer's credit card is valid and reserves a given amount. Returns a transaction ID to be used in a Capture Payment transaction. This does not affect the user's account balance in PortaBilling® or his credit card balance. Note: the transaction ID will be written to the customer's Notepad entry.
	Capture Payment: Charges the customer's credit card and applies the amount to his balance as a payment (decreases the customer's balance). Requires a transaction ID from the Authorization Only transaction. The amount must be less than or equal to the amount of the corresponding Authorization Only transaction.
Amount	Amount to charge / refund.
Service (only for Manual charge and Manual credit)	A service for which the manual charge / credit is made. The charged / credited amount will be included in the selected service section on the next invoice.
Tax Transaction Code (only for Manual charge and Manual credit)	An internal code by which taxes are calculated for this transaction. This code is mapped to the taxation codes of EZTax®, Avalara, GST or SureTax taxation plug-ins as defined in PortaBilling®.
	The Tax Transaction Code field is only available for Manual charge and Manual credit transactions.
Date (only for Manual charge and Manual credit)	A date associated with the manual charge / credit. For example, you can specify a date for manual credit action for when an item is credited.
	Note that if the selected date falls within a previous (closed) billing period the transaction will be included in the next invoice.
Include into	This allows you to include transactions on an out-

Out-Of-Turn Invoice (only for Manual charge and Manual credit transactions)	of-turn invoice to be issued on demand. You should then generate the invoice with the requisite transactions on the Out-Of-Turn Invoice page. For example, if the end user visits your office to buy a new IP phone, your clerk will locate the account, issue an invoice covering the cost of the phone, take the money for the phone and give the phone and the invoice to the end user.
Turner (in ID	Transactions included in an out-of-turn invoice that was <i>generated</i> on the Out-Of-Turn Invoice page won't be reflected on the regular invoice issued at the end of the billing period.
Transaction ID	The transaction ID obtained via the <i>Authorization</i>
(only for E-Commerce Refund and Capture	<i>Only</i> transaction. This is required to use the reserved earlier amount for a current transaction.
Payment)	reserved carner amount for a current transaction.
Visible	A comment on this transaction visible to the
Comment	administrator as well as the customer, in the xDR
	browser or on the invoice.
Internal	An internal comment on this transaction; not
Comment	visible in the xDR browser, and accessible only
	from the database directly.

Field	Description
Alias	This defines whether an alias can be used
authentication	independently for making and receiving calls.
/registration	• Use system configuration (Enabled) – This is
defaults	the default value. It allows to use an alias for
	making and receiving calls. The alias inherits the
	configuration of the main account and uses its
	balance, products and other parameters for all
	further operations.
	• Enabled alias authentication/registration -
	This means a user can register an alias ID and use
	that number for making and receiving calls. The

Bundle Promotion	 alias inherits the configuration of the main account. When a user makes a call via an alias, funds are drawn from the main account. Disabled alias authentication/registration - This means that incoming calls to the alias will be forwarded to the main account. Once disabled, a user cannot register an alias to make outgoing calls. Bundle promotion to be applied to this customer.
Discount Plan	Volume discount plan to be applied to this customer.
Subscription Discount Rate	Amount of discount applied by default to all subscriptions of this customer (assigned either directly to a customer or to one of his accounts).
Suspend on insufficient funds for subscriptions	 This option allows you to suspend a customer when their balance or available funds are insufficient to cover subscription charges of subscriptions assigned to them directly. As defined by the Customer Class – Option configured for the customer class is used. Yes – Customers who have insufficient available funds are automatically suspended. When they are suspended, they no longer receive the service and therefore no subscription charges are generated. As soon as funds become available, the service is resumed and new charges are generated. No – The full amount of subscription will be charged and the balance of the customer will exceed the credit limit or the amount of available funds (in this case the negative value will appear).
Distributor	Assigns a distributor to this customer if any.
Representative	Assigns a representative to this customer if any.
Use Hierarchy of Offices	 This defines two types of customers: Main Office (HQ) customers. Branch Office (site) customers.
	Main Office (HQ) and Branch Office (site) customers are linked together into a group.

Field	Description
Permanent	The credit limit value defined for a customer during
Credit Limit	creation.
Temporary	Here you can temporarily increase a customer's credit
Credit Limit	limit (the value should be defined either as an amount
Increase (only	or as a percentage of a positive Permanent Credit
for postpaid	Limit value). This shows a temporary increase of the
customers)	customer's credit limit.
Valid	Specify the date and time for when an increased credit
Until (only for	limit value will automatically be reverted to a
postpaid	permanent state.
customets)	
	NOTE : The values for the Temporary Credit Limit and Valid
	Until cannot be higher than the values provided in the Maximum possible increase prompt.
Low Funds/	If a warning threshold is defined for a customer
Credit Limit	balance and the customer balance reaches this value, a
Warning	notification is sent to the customer.
Threshold(s)	
	Depending on the customer balance model, warning
	thresholds are known as:
	Credit Limit Warning Threshold for postpaid
	customers.
	Low Funds Warning Threshold for prepaid
	customers.
	For <i>postpaid</i> customers the balance warning threshold
	is defined either as an amount or a percentage of a
	positive Permanent Credit Limit value.
	For <i>prepaid</i> customers, balance warning thresholds are
	defined only as an amount of an Available
	Funds value.
	To send customers multiple notifications, define
	several balance warning thresholds as comma-
	separated values.

	1
Unallocated	Unallocated payments show that the customer
Payments	"overpaid" you sometime in the past, and are used to
	correct the paid/unpaid status of future invoices.
	1 ' 1
	NOTE: Unallocated payments do not represent a "cash
	reserve." When a payment is made, the amount is immediately
	applied to the customer's balance.
Credit Limit	This shows changes made to the customer's credit
History	limit (e.g. increases, decreases, temporary increases,
	etc.). Available only for postpaid customers.
Subscriber-to-	This allows end users to transfer funds among
Subscriber	accounts (only debit accounts can transfer and receive
transfers	funds).
allowed	
	• As defined by the customer class – The
	option configured for the customer class is
	used.
	• Yes – Debit accounts that have sufficient
	available funds are able to transfer funds.
	 No – Debit accounts are not allowed to transfer
	available funds.

Date & Time Format

PortaBilling[®] allows defining both input and output date and time formats for each customer registered in the system.

By making changes to the date and / or time format on this page, customers will be able to enter dates and times in the desired format throughout the entire customer self-care interface, on invoices, and so on (see the screenshot below).

See the **Date & Time format** section for examples of date and time format usage.

Service configuration

Using this tab, you can activate / deactivate various features of the services provided. Note that features are defined per *service type* (the physical service provided to the user) rather than per *service* (the name used in the billing configuration and "visible" to the end user). Thus if you decide tomorrow to bundle your VoIP services under a different name, and create a new service called "Internet Telephony" rather than the old name, "Voice Call", you do not actually have to change the configuration settings for any of your customers.

pre-	
activ	vation, giving information about various
avai	lable options, and so on.
Music On Hold Def	ines the music on hold to be used with the IP
Cen	trex environment. Choose None to disable this
feat	ure, or select the default setting for the
cust	omer. To upload your own music, select a file
	our local file system using the Browse button.
	ename the music, enter the desired name in the
	sic Name field; otherwise the local file name
	be used. The uploaded music will replace the
1	rious entry in the list, and is usually enabled
	in 10 minutes.
Call Parking Ena	bles call parking for this customer's IP Centrex.
•	Park Prefix – The end user can dial this access
	code to park a call. The default value is $*70$.
•	Release Prefix – The end user can dial this
	access code to retrieve a call from the parked status. The default value is *71.
	status. The default value is 771.
The	se access codes are available only if call parking
	abled for the customer.
	s specifies the RTP proxy policy for this
5	omer.
•	Use Default – This uses Optimal RTP proxy.
CLI Trust	1 1 7
Accept Caller •	Favor forwarder – Use the redirector-
Identity	provided ID for caller identification.
•	Caller only – Use the caller-provided ID for
	caller identification.
•	None – Do not accept caller-provided ID
	for caller identification.
Supply Caller •	Yes – accept the remote network and maintain
Identity	caller ID on outgoing headers (even for private
-	calls).
•	No – do not accept the remote network
	and strip any private caller's ID.

Parameters for the Voice Calls service type

.	
Limit	
simultaneous	
calls	
Limit	Engage real-time checks of the number of
Simultaneous	concurrent calls made by this customer's accounts.
Calls	When the specified number of concurrent calls has
	already been established (calls are in a "connected"
	state) and the account tries to place another call,
	that call will be rejected.
	NOTE : To enable the Limit Simultaneous Calls feature, activate the send_start_acct option for the corresponding PortaSIP instances on the Configuration Server. To increase the features accuracy, activate the allow_reauth option too. Note that these features may slightly increase the load on the billing engine.
Count	• All calls – Choose this option to allow a
	specific number of concurrent calls (both
	internal and external).
	• Off-centrex calls only – Choose this option
	to allow only a specific number of external
	concurrent calls. Once this specified number
	of simultaneous calls is established and an end
	user attempts to place another call, that call is
	rejected. This limitation applies to external calls
	only. IP Centrex users can call each other as much as they need.
	much as they need.
Codec	Select a suitable codec connectivity profile that will
connectivity	be used for bandwidth allocation calculation. Every
profile	new call's allocated bandwidth is calculated by
	considering a negotiated codec and its parameters to
	enable full use of the available bandwidth and block
	new calls if no more bandwidth is available.
Max bandwidth	This allows you to configure the bandwidth
	utilization limitation to ensure that only an
	acceptable number of calls are allowed, in order to
	avoid severe degradation of the sound quality on
	calls in progress.
	The system plays a 'limit reached' warning when
	allocated bandwidth is used up.
	NOTE : Playing warning prompts requires an additional 8 Kbps of bandwidth. Therefore, set aside a certain amount of bandwidth (about 8 Kbps) when you define the bandwidth limit.
	Note that only external calls are scrutinized during

	bandwidth consumption calculation.
	 Max incoming bandwidth – This allows you to configure the bandwidth utilization limitation for incoming calls. Max outgoing bandwidth – This allows you to configure the bandwidth utilization limitation for outgoing calls.
	The Dialing Rules section
Dialing Rules	This permits you to enable / disable the dialing rules.
Dialing Format	 Select one of the existent dialing rule formats. Click the Wizard icon to review the selected dialing rule. Select Custom Dialing Rule if you want to create personalized dialing settings for a customer. Then click the Wizard icon to open the Dialing Rule Wizard.
Translate CLI on outgoing calls	This permits you to translate the CLI number in outgoing calls based on the selected dialing format.
Translate CLI on incoming calls	This permits you to translate the CLI number in incoming calls based on the selected dialing format.
	The Fraud Detection section
Location Information	 In this section you can set the country that the end user is currently in or usually resides in (and thus this country will be treated as 'safe' when the system checks for fraudulent activity) and whether the end user is allowed to make calls from abroad. Enabled – Select this option to provide information about the end user's current 'default' country and whether they are permitted to make calls from abroad. Disabled – Select this option if such information must not be provided. In this case, fraud detection, if enabled, is based solely on the geo / risk profile settings.

Allowed	This option is available only when Location
Mobility	Information is set to Enabled.
J	Specify whether the end user is permitted to make calls from abroad.
	Stationary User (Permanent Location) –
	Select this option for residential users who
	may only make calls from a single country.
	These end users are not authorized to make
	calls from countries other than their default
	one, and outgoing calls made from other
	countries will be screened.
	 Roaming User (Changeable Location) –
	Select this option for users who frequently
	travel to different countries.
	In this case, the call will be screened if it <i>does</i>
	<i>not meet</i> one of the following conditions:
	 The call is made from the end user's default
	country.
	 The call is made from countries in the No
	Restrictions section in the geo / risk profile
	specified in the end user's product.
	 The call is made from countries in
	the Suspicious section of the geo / risk
	profile, but the number of calls does not
	exceed the value permitted (also specified in
	the geo / risk profile).
0	This option is available only when Location
Current	Information is set to Enabled.
Location	Select the country from the list.
	The Outgoing Calls section
Override	Here you can set options that an end user may use
Identity	for an identity. If an end user applies an identity that
-	does not belong among the options permitted, it
	will be replaced with an identity provided by an
	administrator. PortaBilling® provides several
	options for overriding identity information:
	• Never – The caller's identity information
	supplied by the remote party will neither be
	screened nor overridden. This implies that the
	remote party is trusted and takes full
	responsibility for the supplied display number
	and display name
	• If Different From Account ID And Aliases
	– The identity will be overridden if it differs
	from the ID of the account that is authorized
	for the call and any of the aliases assigned to

	If Different From All Customer Accounts –
	 The identity will be overridden if it doesn't match an account ID (or account alias) of any account belonging to this customer If Different From All Accounts In The Specified Batch – An end user may only specify an identity (account ID or account alias) that belongs to his account's batch. If a specified identity does not belong to that batch, it will be replaced with an identity provided by an administrator. If Different From All Accounts in the Specified Huntgroup – An end user may only specify an identity (account ID or account alias) that belongs to his account's huntgroup. If a specified identity does not belong to the huntgroup, it will be replaced with an identity provided by an administrator. If Different From All Accounts in the Specified identity does not belong to the huntgroup, it will be replaced with an identity provided by an administrator. If Different From All Accounts in the Specified Site – An end user may only specify an identity (account ID or account alias) that belongs to his account's huntgroup is provided by an administrator. If Different From All Accounts in the Specified Site – An end user may only specify an identity (account ID or account alias) that belongs to his account's site. If a specified identity does not belong to that site, it will be replaced with an identity provided by an administrator. Always – The identity value supplied by the remote party will always be overridden. This allows you to manually specify the display
	number and / or the display name for an
Batch	account. This allows you to specify the batch (this field is
	only available when If Different From All Accounts In The Specified Batch has been selected).
Huntgroup	This allows you to specify a huntgroup (this field is only available when If Different From All Accounts In The Specified Huntgroup is selected).
Site	This allows you to specify a site (this field is only available when If Different From All Accounts In The Specified Site is selected).
Identity	Here you can specify a default value that will replace the account identity (or display number) when the identity used for the call in the RPID / PAI headers (or From header) is invalid. If not specified, the account ID will be used instead.

Override Display Number	 This allows you to control the "Caller number" value that will be placed in the From: header and typically displayed on the called party's phone display. The possible values are: Never – The display number supplied by the remote party is not restricted and therefore will not be modified. This allows the remote IP phone or IP PBX to supply any CLI / ANI number. If Ruled Out By The Identity Constraint – The validity of a display number supplied by a remote party is verified according to a rule set for identity. For example, when the <i>If Different From Account ID And Aliases</i> option is selected in the Override Identity list, and the display number supplied by the remote party doesn't match the ID of the account that is authorized for the call or any of the aliases assigned to this account, the display number will be overridden. If Different From The Used Identity – The display number supplied by the remote party (in the From: header) will be overridden if it is different from the used (already checked and / or overridden according to the Override Identity. Always – The display number supplied by the remote party will always be overridden. This allows you to manually specify the display number for an account.
Override Display Name	 This allows you to override the caller name used by the calling account. The possible values are: Never – The display name supplied by the remote party is not restricted therefore it will not be modified. This allows the remote IP phone or IP PBX to supply any display name Always – The display name supplied by the remote party will always be overridden
Paging / Intercom	

Paging / Intercom	This allows you to enable the intercom feature for accounts under this customer.
	An end user can dial a special service code before a phone number to establish an intercom connection (two-way communication using phone's loudspeakers) with a colleague (within the same IP Centrex).
	The Incoming Calls section
Endpoint Redirection	This allows the end user to configure call redirection on their SIP phones (if this feature is supported by the SIP phone).
Ext-to-Ext Call	For incoming calls from phones within the IP
Distinctive Ring	Centrex environment, use a ring pattern different from the default one.
Sip Contact	
Sip Contact	Enable this feature to define the way a SIP device will perform SIP registration to PortaSwitch®.
Deliver	Define whether the IP PBX address for delivering
Incoming Calls	incoming calls is taken from the IP PBX registration
То	account or specified directly in the Static
	Address field.
Account	This shows the customer's IP PBX registration account.
	This option is usually selected if a customer's IP PBX is located at a dynamic IP address and can register only the main phone line (provisioned as the registration account in PortaBilling®) on the PortaSIP® server.

Static Address	 Enable this feature if the customer's IP PBX can't perform SIP registration to PortaSwitch®. Use Original CLD – Specify the destination number that calls will be routed to. If left blank, the number originally dialed will be used as the destination number. Host – This contains the destination host the calls will be routed to. A customer's IP PBX can be identified with one of the following options: A valid IP address (four numbers separated by points, e.g. 12.34.56.78). A valid domain name (e.g. pbx.example.com). A valid domain name with configured DNS SVR records. In this case, PortaSIP® will round-robin through them.
Transport	Select the transport protocol (either TCP or UDP) that is used to deliver incoming calls.
User- managed SIP addresses	
User-managed SIP addresses	 Define to which external SIP proxies the customer can forward calls using the SIP URI forward feature. Addresses – Type IP addresses or hostnames of external SIP proxies here. Use one of the following formats: IP address IP address: IP address:port hostname hostname:port A user-managed SIP address must be unique. Its value length should not be greater than the allowed maximum (255).
Group Pickup	

Group Pickup	 The Group Pickup feature enables members of the same huntgroup to answer each other's calls by dialing a Group Pickup Prefix. To fine-tune a group pickup functionality, a customer can organize IP Centrex extensions into pickup groups. Pickup groups are based on huntgroups, i.e. huntgroup A with number 2000 can serve as primary pickup group for its extensions 123 and 456. At the same time extension 123 can also belong to huntgroup B with number 9999. In this example, extension 123 has the following pickup options: To pick up an incoming call to huntgroup A (its primary pickup group) by dialing only *40; To pick up an incoming call to extension 456 by dialing *40456 (both extensions belong to the same huntgroup and have it as
	 belong to the same huntgroup and have it as their primary pickup group); To pick up an incoming call to huntgroup B by dialing *409999 (since extension 123 also belongs to this huntgroup).
	Note that group pickup must be enabled for the particular huntgroup as well.
	In case no primary pickup groups are defined within the IP Centrex (e.g. a small company with only several staff members) any extension can pick up incoming calls of others by dialing only the pickup prefix.

Abbreviated dialing

Here you can define a list of phone extensions for customer's IP Centrex environment, plus create abbreviated dialing for external phone numbers. The **Abbreviated Dialing** feature works with both SIP and H.323, with adequate support from either PortaSIP® or Cisco TCL IVR.

A PortaBilling® customer can set up dialing rules as an international prefix, outside prefix, direct number (e.g. 911), or abbreviated dialing for his accounts.

NOTE: To be able to add abbreviated numbers, first type the maximum number of digits that a short number must consist of into the **Maximum Abbreviated Number Length** field and click **Save** on the toolbar.

For example, if you save '3' in the **Maximum Abbreviated Number Length** field, you will be able to use abbreviated numbers like 1, 2, 34, 145, 999, etc.

		7						4013							Canteen			×			

To add a new abbreviated dialing number, click the 🖪 Add button and enter the following information:

Field	Description
Abbreviated #	The number the end user will dial on his phone
	(extension number).
# to Dial	The number that the call will be forwarded to. You
	may enter the ID of one of the customer's accounts
	(use the 🗐 icon for a pop-up window where you can
	see all of them) or any phone number. If you leave this
	field blank, then the abbreviated number is considered
	to be a direct number, or "dial as is". This is useful for
	making sure that special numbers (e.g. 112) are never
	converted by other translation rules.
	Note: Phone numbers must be entered in the E.164
	format.
Description	Description of this abbreviated number, e.g.
	"Andrew's IP phone".
SIP	If # to Dial represents the ID of one of the customer's
	accounts, you will see the SIP "lamp" icon here. It will
	light up if the account is currently being used by a SIP
	UA to register with the SIP server; otherwise it will be
	gray.

Subscriptions

This tab displays the subscription plans currently applied to this customer.

Subscriptions are divided into three groups:

- **Pending Subscriptions** displays subscriptions which are not active yet (i.e. they will be activated sometime in the future). While a subscription is in pending status, it can be deleted.
- Active Subscriptions displays currently activated (and billed) subscription plans.
- **Closed Subscriptions** displays subscriptions which have already been closed.

Field	Description
Product/Subscriptions	The subscription plan name.
	Click this link to open the
	corresponding subscription plan.
Monthly Fee (for	For subscriptions with prepaid
subscriptions charged	plans: Shows the fee for the current
progressively)	prepay period and the period
	duration.
	• For subscriptions without prepaid
	plans: Shows the subscription fee
	for the current billing period.
Discount Rate, %	Enter a discount rate for this subscription. If
	you leave this field empty, it means that the
	discount rate defined in the customer
	information should be applied. If you enter
	any value, it will override the customer
	discount rate. 0 means no discount (i.e. the
	rate defined in the subscription plan is
	applied).
Discount Rate, %	Enter a discount rate for this subscription. If
	you leave this field empty, it means that the
	discount rate defined in the customer
	information should be applied. If you enter
	any value, it will override the customer
	discount rate. 0 means no discount (i.e. the

	rate defined in the subscription plan is
	applied).
Start Date	Enter the desired subscription activation
	date: immediately, or sometime in the future.
Activation Date	(Read-only) Displays the date when the
	subscription was activated.
Finish Date	Enter the date when this subscription should
	be automatically canceled.
Billed To	(Read-only) The date to which subscription
	charges have already been applied.
Subscription Plan	The subscription plan name as the end user
Name Visible to End	will see it on the invoice.
User	
Close	Allows you to close one of the optional
	subscriptions.

Field	Description
Current	Time zone in which customer's billing period will be
Billing Time	closed and invoices will be generated.
Zone	_
Current	Defines the frequency of invoicing for this customer.
Billing Period	
Next Billing	Read-only field; displays the date when the customer's
Date	current billing will be closed (and invoice and statistics
	generated).
Status	Read-only field; allows you to track important events
History	in a customer's lifecycle, such as when the customer
	was created, blocked / unblocked or provisionally
	terminated / opened.

Invoices & taxation

On this tab you can define the following:

- How to tax the customer for provided services.
- Whether to send statistics and invoices by email.
- What invoice template to use and how to enumerate the invoices.

Field	Description
Tax ID	Customer's tax ID.
Taxation Plugin	 No Taxation – Select this option if the customer is exempt from taxation. Avalara – Select this method to use the Avalara plug-in. Avalara – one of the largest tax calculation companies in the USA. Tax calculation via Avalara is done using the XML API. Your taxation configuration is stored within Avalara and all taxes are calculated by the Avalara middleware. EZtax (US, Canada) – The former version of the Avalara plug-in. Select this method to use the EZtax plug-in. Available for backward compatibility. due to the simplified management of the Avalara updates, it is recommended that you switch to Avalara taxation. SureTax (US, Canada) – Select this method to tax voice call services and subscriptions in the US and Canada. SureTax is another taxation system that allows you to accurately and easily calculate taxes for your US and Canadian customers. Fixed VAT Rate – Select this method when you need to specify a certain percentage of value-added tax. Custom taxation – This taxation plug-in is similar to VAT, but allows you to specify more than one tax and rate. MOTE: This option is only visible if at least one custom tax is defined on the Custom Taxes page. GST (Malaysia) – This plug-in handles the goods and services tax (GST) that was

	implemented in Malaysia in April 2015.
Send Statistics via email	Defines what kind of xDR statistics should be delivered to the customer by email after the billing period is closed:
	 As defined by the Customer Class – Use the settings for the customer class. Full Statistics – Send a .csv file with a complete list of xDRs. Summary Only – Do not send a full list of xDRs, only a brief summary Do Not Send – This option prevents the delivery of event statistics to the customer via email.
	Note that these options only affect the delivery of xDR files by email. The actual statistics files will always be generated and accessible for download from the administrator interface or customer self-care interface.
Generate Invoice PDF	 As defined by the Customer Class – With this option enabled, PortaBilling® uses the settings defined for the customer class. At the end of the billing period – With this option enabled, PortaBilling® processes the customer's xDRs, applies charges (e.g. subscriptions, fees, etc.), creates a regular invoice and generates a .pdf file at the end of the billing period. Postponed, based on resource availability – With this option enabled, PortaBilling® creates a regular invoice and charges a customer's credit card immediately. PortaBilling® begins to generate the .pdf files only once the calculations related to the previous billing period (e.g. xDR processing, statistics) for all customers have been completed. On demand – With this option enabled, PortaBilling® makes all calculations for the customer, creates their regular invoices and saves them to a database. These invoices are then accessible via API. However, the .pdf file will not be generated unless explicitly requested.
Regular Invoice Template	Defines the regular invoice template for this customer.

	 Select As defined by the Customer Class in order to apply the regular invoice template defined for this class, and so avoid defining an invoice template for each customer specifically. Select Do Not Create Invoice to disable regular invoice generation for this customer.
	Change the required invoice termulate from the list
Oref of Trans	Choose the required invoice template from the list.
Out-of-Turn	Defines the out-of-turn invoice template for this
Invoice	customer.
Template	 Choose As defined by the Customer Class in order to apply the out-of-turn invoice template defined for this class, and so avoid defining an invoice template for each customer specifically. Choose Do Not Create Invoice to disable out-of-turn invoice generation for this customer.
	Select the required invoice template from the list.
Send Regular	Defines whether new regular invoices should be
Invoices	delivered to the customer by email.
	 settings defined for the customer class. Yes – Send regular invoices by email. No – Do not send regular invoices by email.
Send Out-of- Turn Invoices	 Defines whether out-of-turn invoices should be delivered to the customer by email. As defined by the Customer Class – Use the settings defined for the customer class. Yes – Send out-of-turn invoices by email. No – Do not send out-of-turn invoices by email.
Invoice Number	Select an invoice number sequence that will be used for this customer:
Sequence	 Default – The default numbering sequence will be selected for this customer's invoices. Individual for Environment – This customer's invoices will have globally sequenced invoice numbering (throughout the environment). Individual for Customer – This customer's invoices will have their own sequential numbering.

Since taxation parameters depend on the specific taxation module and your local tax laws, please consult your tax attorney for details regarding their use.

Measured services

On this tab you can configure which allocated resources will be measured and what charges will be applied for their consumption. All resources consumed have their own metrics.

• • •					Edi	it Sub	custome	r 'David	Welsh'

NOTE: Each metric can only be added once per customer.

T! 1 1	
Field	Description
Measured	Specify which consumed resource will be measured
Parameter	and aggregated.
	The available options are:
	• Active calls – The actual number of connected
	calls at a specific moment in time.
	• Concurrent calls – The number of
	simultaneous outgoing calls allowed for a
	particular customer. This amount is defined for
	the customer or customer site by the
	administrator (in the Limit Simultaneous
	Calls service feature).
	• PBX Extensions – The number of extensions a
	customer defines within their IP Centrex
	environment.
Apply Charge	Select this check box to apply charges to customers
	for consumed resources.
	If left clear, measured resources data will be used for
	statistics purposes only.
Charge Based	Select which criteria will form the basis for charges to
On Value	be calculated and applied to customers.
Within Period	
	The available options are:
	• Average – At the end of a billing period the

	system collects aggregated measurements and calculates their average. It is then used for
	8
	calculating a customer's charges.
	• Maximum – At the end of a billing period the
	system collects aggregated measurements,
	extracts their maximum value and uses that for
	assessing a customer's charges.
	• Minimum – At the end of a billing period the
	system collects aggregated measurements,
	extracts their minimum value and uses that for
	calculating a customer's charges.
Charge for	Specify the price for each consumed unit of
Each Item	resources.
Do Not Apply	Specify the amount of consumed resources that the
Charges for	customer will not be charged for (as a rule this is
the First	included in the customer's service bundle).
Items	
Charge Rate	Select which rate code is to be used to calculate
Code	charges for resources consumed. This rate code is
	shown in the customer's xDRs and invoices.
Service	The service type used to calculate charges for
	resources consumed. This service type is shown in
	the customer's xDRs and invoices.

To browse resource usage statistics, click the A Click here to view graphs icon next to the necessary resource metric.

The statistics window consists of two graphs. The bottom graph displays resource usage data for the last three months; the upper graph displays a detailed view of the resource usage for a particular time interval selected from the three-month period below.

To select a time period, click on the start date in the bottom graph and drag the mouse cursor to the finish date.

The topmost part of the window provides additional information about the selected metric. The following options are available:

Field	Description
Charges for	This represents the customer's billing period. You can
the period	select any of this customer's billing periods within the
	xDR storage time and see their charges.
Value	This is the measured resource value defined for the
	selected metric for the current billing period. It can be
	minimum, maximum or average.
Amount	If any resource consumption charges have been applied
	to the customer, they are displayed for the selected
	billing period.
	Charges for the current billing period will not be
	displayed since it is not yet closed.
	If no charges were applied to the customer, a zero
	amount is displayed.
Remained	The number of available allocated resources that are
Free Items	included in the service bundle for the current billing
	period.

Distributors

On the **Distributor Management** page you can view all distributors you cooperate with.

6		80	1) (2				D	istribı	utor Manag	gement					/Vancouver		? Help
•	٠	Add	8) Clo	se										Limit:	50.00 USD	💵 Logout	
							Туре			Custom	ier Class		Search		Advance	d		
						Direct Distribut	ons		▼ A	NY		•		Search	Search	-		
				хC	Rs	ID	Customers	Accounts	Currency	Balance Control	Available Funds	Balance	Credit Limit	Email		Status Delet	te	
				Ū		EasyCall distributor	嗝	9	USD	Postpaid	-	0.00000	100.00000					

To add a new distributor, click 🕑 Add on the toolbar.

The **Add Distributor** page allows you to define a new client entity within PortaBilling®. The information on the top of the form and for the **Default Sale Commission** and **Default Payment Commission** fields on the **Additional Info** tab is mandatory. Information on all the other tabs is optional, and need not be provided when creating the distributor.

					A	dd Distributo	r				
🖬 Save	e 📄 Sav	e & Close	🛞 Close						Limit: 50.00 USD	📲 Logout	
		Jesse Jame	s		Cur	tomer Class rency manent Credit Limit	Easy Call reseller	•

	Sale Comm Payment C	nission * ommission		10	%		Representative	Not Defined	Ŧ		
	otion Discou		for subscri	ptions As det	% fined by the	Customer Class					

Field	Description
Customer ID	Defines the distributor name as it will appear
	in the PortaBilling® system. This is distinct
	from the Company Name field in
	the Address Info tab.
Blocked	Blocks all accounts of this distributor.
Customer Class	The customer class assigned to this
	distributor. In order to change any
	parameters of the particular customer class,
	click on the link Customer Class.
	When adding a distributor, be aware that if
	you select a class with a defined currency, the
	field Currency will show the corresponding
	value and this cannot be modified; if the class
	without a predefined currency is selected,
	then a list of currencies will be available.
	When editing the distributor, the
	field Customer Class will only contain

	1
	classes with the <i>same</i> currency, or classes with
	no defined currency.
Currency	The currency must be specified by selecting it
-	from the drop-down list of available
	currencies. Once saved, the currency cannot
	be changed.
Permanent Credit	If this field is left empty, there is no credit
Limit	limit defined for this distributor; we strongly
	recommend entering a value here. This helps
	to avoid a situation where the distributor
	would activate too many accounts without
	first submitting payment for accounts already
	activated, and thus limits the ITSP's risk of
	loss in case the distributor goes out of
	business.

To save the new distributor, click **Save**.

Edit distributor

The **Edit Distributor** page allows you to change distributors details. Some fields are read-only.

		88						E	dit Distril	butor	'Jess	e James'

The following are associated with a distributor:

- **Default Sale Commission** (this is applied when an account is created or a distributor is assigned).
- **Default Payment Commission** (this is applied when payment is entered).

When a customer or account is created or activated under the distributor, the distributor's balance increases by the account's balance, minus his commission. For example, if the distributor's commission percentage is 15% (default sales commission), and a new account with a \$10 balance has been created, then the distributor is charged \$8.5 and has a \$1.5 profit. When the distributor applies payment of \$10 towards an account, and his payment commission is 10% (default payment commission), then the distributor is charged \$9 and has a \$1 profit.

When the distributor makes a payment in favor of his customer, the batch commission rate is used by default, except in the following cases:

- The batch has not been assigned a commission rate.
- The debit account does not belong to any batch.

In these cases, the distributor's commission rate is used.

The distributor will be charged:

- When he applies payment toward a customer or an account.
- When he is assigned to an active account.
- When an account to which he has been assigned is activated (or when a new account is created in the active state).

To generate a batch of accounts, you can use the account generator and assign the distributor to these accounts. The account generator only permits the creation of an inactive debit when a distributor has been selected.

Account info

The **Account Info** page is provided for Customer Care staffs which are responsible for answering requests from Account holders and carrying out refunds. Some account details are read-only. The interface requires that the Account holder provide the operator the Account ID.

Click the **Show Accounts** button to see the Account Information for that Account.

When making any changes, the Help Desk staff should also provide a comment in the Notepad, detailing the reason for the changes (for example, "user unable to call due to network outage, credited \$5"). Changes can be confirmed by selecting **Save**, or **Save&Close**.

To deactivate an active debit account, press the **Terminate** button in the toolbar.

Field	Description
Account Role	The account role defines what a specific account is designated for (e.g. whether the account represents a phone line or a top-up voucher) and executes account ID validation. Thus, for a phone line, one can only pick a valid phone number as an account ID.
Main Product	The Product providing the pricing plans for this account. You can select a product that role equals to account role.
Account ID	The primary identification of this account. The ID is read-only by default; you can modify it by clicking the Edit ID 2 icon. The maximum allowed ID length is 64 characters.
Blocked	Specifies whether the account is blocked or unblocked. The account will be unusable if this is checked, and is usually unblocked automatically once the account is used for the first time.
Balance	Account's balance. For debit accounts this the amount of their funds for using the service. For credit accounts with the individual credit limit defined this shows the sum of funds owned to the service provider for the service usage.

Account Info

Customer	The Customer this account belongs to.
Туре	The Account type may be one of "Debit", "Credit", or "Voucher". Debit is usually associated with pre- paid cards. Credit is a type of account that will be invoiced for incurred costs. Voucher accounts are "refill coupons" for debit accounts.
Service	The password used to authenticate any calls made
Password	using this account.
Email	The email that is associated with the account.
Opening	The opening balance for this account.

Balance	
User Agent	Displays the user agent identification info when this account is currently used by this SIP UA to register
	with the SIP server.
Contact	The URI of the user agent used by the SIP Proxy to
	contact the IP phone.

	Fair Usage Policy	
	Fair Usage Policy: Disabled	
	Music on Hold (Reset/override)	
	Music on Hold: Enabled	

Field	Description
	The Voice Calls service type
RTP Proxy	This specifies the RTP proxy policy for this account.
	• Use Default – This uses Optimal RTP proxy
	policy.
	• As defined by the Customer – This inherits
	the policy defined in the customer's settings.
Legal Intercept	Intercept all incoming and outgoing calls of this
	specific account for law enforcement purposes.
Service Policy	This specifies a predefined set of options for this
	account.

Eatr Lisage	
Fair Usage	This shows the Fair Usage Policy settings as applied
Policy	to the account via Product . The field works in read-
N · O	only mode.
Music On	Defines the music on hold to be used with the
Hold	account. Choose None to disable this feature, or
	select the default setting for the account's customer.
	To upload your own music, select a file on your local
	file system using the Browse button. To rename the
	music, enter the desired name in the Music Name
	field; otherwise the local file name will be used. The
	uploaded music will replace the previous entry in the
	list, and is usually enabled within 10 minutes.
Call Recording	Enables the recording of calls made or received
	by this specific account. The user can start and stop
	recording a specific phone conversation after it has
	already started by using various phone controls.
CLI Trust	Accept Caller Identity:
	This option indicates acceptance.
	• Favor forwarder – Use the redirector provided
	ID for caller identification.
	• Caller only – Use the caller provided ID for
	caller identification.
	• None – Do not accept caller provided ID
	for caller identification
	Supply Caller Identity:
	This option indicates acceptance.
	• Yes – Accept the remote network and maintain
	caller ID on outgoing headers (even for private calls).
	• No – Do not accept the remote network
	and strip any private caller's ID.
Limit	This shows the Limit Simultaneous Calls settings
Simultaneous	as applied to the account either via Customer or
Calls	Site . The information is available in read-only mode.
	NOTE: To enable the Limit Simultaneous Calls feature,
	activate the send_start_acct option for the corresponding PortaSIP instances on the Configuration Server. To increase the features accuracy, activate the allow_reauth option too. Note that these features may slightly increase the load on the billing engine.

Associated	San if a the more hand a hand had had the IVD is an			
Number	Specifies the number to be sent back to the IVR in an			
Number	authorization confirmation. For example, this might			
	be a redirect to a technical support number in an IVR			
	application. Another example might be a quick-dial			
	number for prepaid accounts. (In this case, the			
	redirect number may be maintained via web self-			
	provisioning.)			
	The Dialing Rules section			
Dialing Rules	This permits you to enable / disable the dialing rules.			
Dialing Format	• Select one of the existent dialing rule formats.			
	Click the Wizard icon to review the selected			
	dialing rule.			
	• Select Custom Dialing Rule if you want to			
	create personalized dialing settings for a			
	customer. Then click the Wizard icon to			
	open the Dialing Rule Wizard.			
Translate CLI	This permits you to translate the CLI number in			
on outgoing	outgoing calls based on the selected dialing format.			
calls				
Translate CLI	This permits you to translate the CLI number in			
on incoming	incoming calls based on the selected dialing format.			
calls				
	The Fraud Detection section			
	In this section you can set the country that the end			
	user is currently in or usually resides in (and thus this			
	country will be treated as 'safe' when the system			
	checks for fraudulent activity) and whether the end			
	user is allowed to make calls from abroad.			
Location	• Enabled – Select this option to provide			
	information about the end user's current 'default'			
Information	country and whether they are permitted to make			
	calls from abroad.			
	• Disabled – Select this option if such			
	information must not be provided. In this case,			
	fraud detection, if enabled, is based solely on the			
	geo / risk profile settings.			
L	See / then prome becauge.			

Allowed Mobility	 This option is available only when Location Information is set to Enabled. Specify whether the end user is permitted to make calls from abroad. Stationary User (Permanent Location) – Select this option for residential users who may only make calls from a single country. These end users are not authorized to make calls from countries other than their default one, and outgoing calls made from other countries will be screened. Roaming User (Changeable Location) – Select this option for users who frequently travel to different countries. In this case, the call will be screened if it <i>does not meet</i> one of the following conditions: The call is made from the end user's default country. The call is made from countries in the No Restrictions section in the geo / risk profile specified in the end user's product. The call is made from countries in the Suspicious section of the geo / risk profile, but the number of calls does not exceed the 					
Current Location	value permitted (also specified in the geo / risk profile). This option is available only when Location Information is set to Enabled.					
	Select the country from the list.					
Individual Routing Plan	The Outgoing Calls sectionThis feature permits selection of the routing plan to be used for outgoing calls when the end user dials a number. A specific selection code does not need to be dialed first.					
	 Select Enabled to activate the Individual Routing Plan feature for the account. Select Disabled to prohibit assigning the individual routing plan for this account. 					
Phone Book	Activates the Phone Book feature. This allows an account user to maintain its own set of frequently dialed numbers, assign speed dial codes to them and define a list of favorite numbers.					

Hide CLI	This allows end user to remove / show CLI (ANI)
	information for outgoing calls by dialing special
	feature access code before dialing the phone number.
	Note that when making a call, you can dial the special
	feature access code before dialing the phone number
	to override the default setting.
Override	Override Identity – This allows you to set the
Identity	following options for overriding identity information:
y	• Never – The caller's identity information
	supplied by the remote party will neither be
	screened nor overridden. This implies that the
	remote party is trusted and takes full
	responsibility for the supplied display number
	and display name.
	• If Different from Account ID and Aliases –
	The identity will be overridden if it differs from
	the ID of the account that is authorized for the
	call and any of the aliases assigned to this
	account.
	• If Different from All Customer Accounts –
	The identity will be overridden if it doesn't
	match an account ID (or account alias) of any
	account belonging to this customer.
	• If Different from All Accounts in the
	Specified Batch – This is a more restrictive
	option than the one above; it overrides the
	identity if the account placing the call and the
	account matching the supplied identity do not
	belong under the same batch. This allows you to
	create "groups" under the same customer (within
	the same IP Centrex environment).
	• Always – The identity value supplied by the
	remote party will always be overridden. This
	allows you to manually specify the display
	number and / or the display name for an
	account.
	• Batch – This allows you to specify the batch
	(this field is only available when If Different
	From All Accounts In The Specified
	Batch has been selected).

 Identity – Specify a default value that will replace the account identity (or display number) when the identity used for the call in the RPID / PAI headers (or From header) is invalid. If not specified, the account ID will be used instead. Override Display Number – This allows you to control the "Caller number" value that will be placed in the From: header and typically displayed on the called party's phone display. The possible values are: Never – The display number supplied by the remote party is not restricted and therefore will not be modified. This allows the remote IP phone or IP PBX to supply any CLI / ANI number. If Ruled Out by the Identity Constraint – The validity of a display number supplied by a remote party is verified according to a rule set for identity. For example, when the <i>If Different From Account ID And Aliases</i> option is selected in the Override Identity list, and the display number supplied by the remote party doesn't match the ID of the account that is authorized for the call or any of the aliases assigned to this account, the display number will be overridden. If Different from the Used Identity – The display number supplied by the remote party (in the From: header) will be overridden if it is different from the used (already checked and / or overridden according to the Override Identity. Always – The display number supplied by the remote party (in the From: header) will be overridden. This allows you to manually specify the display number for an account.
Display Number – Specify a value that will override and replace the account's original display number. If no value is specified, it defaults to the account's Identity . Override Display Name – Replace the original account number with the desired name.
 Display Name – This allows you to specify the desired name for the account. Activate emergency services for this account.

	1					
Call via IVR	Allows outgoing calls to be processed in an assigned					
	IVR-capable voice application. For example, the					
	Pass-through IVR application plays a "time left"					
	warning when there are a specific number of seconds					
	left – before the call is disconnected – or it can					
	announce the maximum allowed call duration to the					
	destination and then connect the call. Note that the					
	Pass-through IVR application is launched for all non- free calls to external numbers.					
	free cans to external numbers.					
	The most common option is Product's default. In					
	rare cases, you may need to define special call					
	processing for an account in order to override the					
	product's parameters. In such cases, select Enabled to					
	activate the feature, or Disabled if you do not want to					
	activate it for this account					
	Voice Application – If a call via the IVR feature is					
	enabled, select a voice application for processing the					
	calls. Typically this is a special pass-through IVR					
	application for voiceover announcements during the					
	call, but any standard IVR application can be selected					
	to intercept the outgoing call.					
Call Barring	Activates the Call Barring feature (a new Call					
	Barring tab will appear, where you can configure					
CDC Lingitation	destinations which this user is not allowed to call).					
CPS Limitation	This allows you to enforce the calls per second (CPS)					
	limitation. The CPS limitation defines how many dialing attempts can be made by this account each					
	second.					
	Allowed rate – Set the limit of dialing attempts per					
	second for this account. If the limit is exceeded, new					
	dialing attempts are rejected. The allowed values are					
	from 1 to 1000.					
Preferred IVR	This feature enables or disables the selection of					
Language	languages from the "Language" list.					
	The Incoming Calls section					

TT : (* 1	
Unified	Allows the account user to access the unified
Messaging	messaging system. See the PortaSIP® Media
	Applications Guide for more details.
	Please note that if an account has Unified
	Messaging activated, there will be an additional link
	next to it on the web interface: Voicemail Inbox. By
	clicking on this you will go automatically to the
	account's UM administration pages where you can
	quickly check the configuration of an account's auto-
	attendant, call queues, and the like.
	Also note that it may take a few minutes before an
	account is fully provisioned in PortaSIP® Thus if you
	click on the link immediately after activating Unified
	Messaging, it most likely will not work yet.
Endpoint	This allows the end user to configure call redirection
Redirection	on their SIP phones (if this feature is supported by
Rediffection	the SIP phone)
Caller ID	This option shows the actual name of the caller
(CNAM)	retrieved from the database of the CNAM provider
Lookup	for incoming calls.
Call Waiting	Activates the Call Waiting functionality.
Default	
	Specifies the method of processing incoming calls to
Answering	this account if selective call screening has been
Mode	disabled, or if none of the selective call screening
	rules apply.
Sip Contact	Enable this feature if customer's IP PBX can't
	perform SIP registration to PortaSwitch®.
	Deliver Incoming Calls To – Define whether the
	IP PBX address for delivering incoming calls is taken
	from the IP PBX registration account or specified
	directly in the Static Address field:
	• Account - This shows the customer's IP
	PBX registration account. This option is
	usually selected if a customer's IP PBX is
	located at a dynamic IP address and can
	register only the main phone line
	(provisioned as the registration account in
	PortaBilling [®]) on the PortaSIP [®] server.

	 Static Address – Enable this feature if the customer's IP PBX can't perform SIP registration to PortaSwitch® Use Original CLD – Specify the destination number that calls will be routed to. If left blank, the number originally dialed will be used as the destination number. Host – This contains a valid IP address
	 of customer's IP PBX (four numbers separated by points, e.g. 12.34.56.78). Transport – Select the transport protocol (either TCP or UDP) that is used to deliver incoming calls.
Auto Attendant	Enables the auto attendant functionality for this account. Incoming calls will always go <i>only</i> to the auto attendant despite Unified Messaging functionality also being enabled.
Ext-to-Ext Call Distinctive Ring	For incoming calls from phones within the IP Centrex environment, use a ring pattern different from the default one.
User	Enable this option to allow the usage of custom IVR
Application	application.
External Voicemail	To ensure service continuity for mobile subscribers, you can redirect their calls to your host MNO's voicemail. To do this, enable the External voicemail service feature and define the application's access number.
Present Caller Info	Display caller info on incoming calls.
Call Forwarding	 Assigns a call forwarding mode to this account: No Forwarding – Disables call forwarding entirely. Follow-Me – Enables standard follow-me forwarding. Advanced Forwarding – Activates advanced call forwarding mode. Forward to SIP URI – End users can enter a forwarding destination as a CLD@IP or CLD@domain. PortaSIP® will round-robin through DNS SRV records if they are configured for the specified domain.
	• Simple Forwarding – A simplified type of forwarding where you specify a single phone number to which calls will be sent.

MaximumWhen you select follow-me or advanced callForwardsforwarding, you must also provide a value for the
1 Of warding, you must also provide a value for the
Maximum Forwards parameter, so as to limit the
number of concurrently active forwarding
destinations allowed. Please note that you do not
have to limit the total number of phone numbers
entered, but rather the number of phone numbers
active at any given moment of time. For instance, a
user may have a list of 20 numbers, each active in its
own time period, some temporarily turned off, and se
on. When call forwarding is done, PortaBilling® will
compute a list of numbers which may be used at that
moment, and choose only the first N in the list,
where N is the number specified in Maximum
Forwards.
Forward byThis option is active only when one of the several calDTMFforwarding modes is selected. It allows a user to use
DTMF forwarding modes is selected. It allows a user to use DTMF tones to transfer calls forwarded to the user's
mobile phone from the user's IP Centrex extension,
and to stay on the line until the other party picks up.
and to stay on the line until the other party picks up.
Thus, if a user receives a call to his mobile phone and
needs to transfer it to his colleague at Extension
1002, he dials *661002#, and when his colleague
confirms that she is free to take the call, he hangs up.
Call Screening Enables selective call processing / conditional call
forwarding features
Ringback Tone Enable this feature to choose which ringback tone to
play to a caller:
• Select an available ringback tone from the
list.
• Select Upload New Music to upload a new
file.
The Internet Access service type
Session Limit Allows you to define a specific number of concurren
sessions initiated by the account.

Static IP	Select Enabled if you want to assign a static IP to this account (the default setting is Disabled).
	 Static IP – Type in an IP. Static IP Netmask – Type in a netmask, or leave the default value: 255.255.255.255 Routed Networks – Type in the route for your IPv4 network in the CIDR notation format – X.X.X.Y/Y Z.Z.Z.Z where: X.X.X.X is the IPv4 address that defines the network prefix; Y is the decimal length of the network prefix mask; Z.Z.Z.Z is the gateway IP address; it must belong to the network range. An example of Routed Networks can be this record: 203.0.113.0/24 203.0.113.1
	NOTE: Any incorrect adjustment of this parameter may affect the entire ISP network so please be sure that your settings are correct.
Access Policy	 The most common option is Product default. In rare cases, you may need to set a special policy for an account that will override the product's parameters. In such cases: Select the appropriate internet access policy from the list. Select None if you do not want to limit the
	bandwidth for this account.
	The Conferencing service type
Conferencing Enabled	Allows the account user to use voice-conferencing services.
Number of Simultaneous Participants	Specify the maximum number of concurrent connections allowed for the conference.
	The <i>Wi-Fi</i> service type
Limit Bandwidth	The most common option is Product default . In rare cases, you may need to define special bandwidth values for an account that would override the product's parameters. In such cases, select Yes to define these values, or No if you do not want to limit the bandwidth for this account.
Max Download Rate	Specify the maximum download rate for this account.
Max Upload Rate	Specify the maximum upload rate for this account.
	1

	The IPTV service type							
Channel Package	This feature defines a set of broadcast channels that are available to this account.							
Activation PIN	Specifies a numeric code to be entered from end user's STB (Set-Top Box) remote controller to activate IPTV services. The Messaging Service type							
SMS / MMS Routing Data	 The following options are available: Disabled – This deactivates updating the centralized routing SMS / MMS database for this account. Enabled – This activates updating the centralized routing SMS / MMS database for this account. 							
Update NetNumber database	 Yes – Select this option to update the NetNuber database when this account is added, deleted or its ID is changed. No – Select this option if you don't want to update the NetNumber database for this account. 							

The Customer Care operator can also browse xDRs for the account by clicking the **xDRs** button on the Account Info screen.

On the xDR view page you can make an extensible search via:

- A date and time range by clicking the 🛄 icon.
- A certain service type.
- Required accounts type (for customers only).

To initiate a query, click the **Show xDRs** button. The result page will contain a summary displayed on the top of the screen and a table listing all of the calls and charges from a specified time period.

To browse for additional information about a call, with your mouse cursor point at the **More Info** icon next to the required xDR.

On the xDR history screen the operator can choose to download xDRs by clicking the **Download** button and get more information about service usage using the **Service Usage Details** button.

Trace session

The trace session utility allows you to determine the characteristics of a specific call when you know the **rate pattern** (**destination**), which may be specified exactly, or using a wildcard. (For example, all calls to England may be specified as "44%" in the rate pattern field). A date range for the search must be specified; however, it is highly recommended to set it to the smallest range necessary, in order to reduce waiting time and server load. Ideally, the search window should contain one day only.

To initiate a query, click the **Search Sessions** button. If no results appear, try broadening the query. When the results appear, locate the desired call within the result set. If there are too many results, they will be divided across pages, although in this case it is advisable to narrow the query.
